Published at irregular but frequent intervals since 1950, *Postilla* presents short papers based on original scientific research by Yale Peabody Museum staff and research associates, and their colleagues, in the natural science disciplines represented by the collections of the Yale Peabody Museum's curatorial divisions.

All manuscript submissions are sent out for external peer review by one or more referees, as well as being reviewed internally at the Peabody Museum by the Executive Editor in consultation with the Curatorial Editor-in-Chief and one or more members of the appropriate curatorial division. Interested authors should contact the Executive Editor at the address below before submitting manuscripts.

Other titles published by the Yale Peabody Museum are the *Bulletin of the Peabody Museum of Natural History* and the *Yale University Publications in Anthropology*. A complete list of titles, availability and ordering information as well as submission guidelines for contributors can be obtained from the Yale Peabody Museum website at <http://www.peabody.yale.edu/publications/> or requested from the Publications Office at the address below.

KARL M. WAAGE, Alan M. Bateman Professor Emeritus of Geology and Geophysics at Yale University, was Curator of Invertebrate Paleontology at the Peabody Museum of Natural History from 1946 to 1986, as well as a past director (1979-1982) of the Peabody. This series of type catalogs of invertebrate fossils is dedicated to Karl, who passed away on October 18, 1999 at the age of 83.

After receiving his doctorate from Princeton University in 1946, Karl joined the faculty of the Yale Geology Department. He served as chair of the department between 1973 and 1976 and was named to the Bateman Professorship in 1977. Karl was active in the Paleontological Society, serving as a Councillor between 1974 and 1976. His research on the paleontology and stratigraphy of the Upper Cretaceous Fox Hills Formation of South Dakota resulted in the publication of two definitive monographs on the paleoenvironments (Waage 1968) and ammonite fauna (Landman and Waage 1993) of the Fox Hills. During his tenure at Yale he was advisor to more than 25 graduate students, many of whom have become leaders in the field of paleobiology.

In the 1950s, Karl worked with Carl O. Dunbar to redesign the Peabody Museum's Invertebrate Hall with a new emphasis on the life history and evolution of invertebrates. Their textbook on historical geology used many specimens from the Peabody collections to demonstrate geological and paleontological principles. In the early 1960s, Karl directed a major renovation of Peabody's research collections and facilities, including a series of National Science Foundation grants to reorganize the paleontological collections and expand laboratory facilities for graduate education. These type catalogs, published as part of the Peabody's *Postilla* series, are the outgrowth of an NSF funded project to identify and isolate all type specimens from the fossil invertebrate collections and carries on Karl's initiative to improve the care and accessibility of the Peabody's paleontological collections.

For the inspiration he gave me, I am honored to dedicate this series of type catalogs to Karl, my mentor, friend and "Chief."

**A Type Catalog of Fossil Invertebrates  
(Mollusca: Ammonoidea)  
in the Yale Peabody Museum**

**Russell D. White and Laura K. Skorina**

*(Received 12 August 1999)*

**Abstract**

Type material for 206 nominal species of ammonoids are in the Invertebrate Paleontology Collections of Yale University's Peabody Museum of Natural History. Primary types for 86 nominal species include 46 holotypes, 418 syntypes (representing 36 nominal species), 3 lectotypes and 1 neotype. Secondary types for 35 nominal species include 7 allotypes, 105 paratypes and 36 paralectotypes. Tertiary types of 132 nominal species include 852 hypotypes. Most types are from Coahuila (Mexico), South Dakota, Texas and Wyoming and have been described by E. Böse, S.S. Buckman, W.A. Cobban, N.H. Landman, A.K. Miller and K.M. Waage.

**Key Words**

Type Catalog, Ammonoidea, Yale Peabody Museum, Coahuila (Mexico), South Dakota, Texas, Wyoming, E. Böse, S.S. Buckman, W.A. Cobban, N.H. Landman, A.K. Miller and K.M. Waage.

**Introduction**

This catalog lists all known ammonoid types in the Invertebrate Paleontology Collections housed in Yale University's Peabody Museum of Natural History. This is the eleventh in a series of type catalogs of fossil invertebrates and is a product of an ongoing computerization project to improve the accessibility of the type collections.

Eight type specimens are missing and cannot be located. The collections have been thoroughly searched by the curatorial staff in the 1960s and 1990s and it is believed that these specimens are permanently lost. Missing specimens are indicated with a footnote, and any information on their whereabouts would be greatly appreciated.

**Organization**

Specimens are listed under the originally described binomen; genera and species within genera are indexed alphabetically. Each entry includes the catalog number used by the Division of Invertebrate Paleontology prefixed with the abbreviation YPM and the type status of the original designation, followed by all known references to that name. Any subsequent designations are listed under the original designation and are cross-referenced in the body of the text. Locality descriptions follow each entry or set of entries for each binomen. Errors and inconsistencies are footnoted at the bottom of each binomen.

The type designations used are holotype, syntype, lectotype and neotype for name bearers; allotype, paratype and paralectotype

for secondary types; hypotype is used for all tertiary types. Name bearers and secondary types are defined as used in the *International Code of Zoological Nomenclature* (ICZN 1985). Tertiary types or hypotypes are treated here as any specimens used in an original species description but not explicitly designated primary or secondary types, any described, figured or measured specimen used in a publication to augment the knowledge of a previously defined species, or any referenced specimen that cannot be placed unequivocally in a known species (e.g., *Hoploscaphites* sp.).

Locality descriptions follow each entry or set of entries with identical locality data. The locality information includes the stratigraphy, geography, collector and date. Stratigraphy has been standardized using *Stratigraphic Nomenclature Databases for the United States, its Possessions and Territories* (MacLachlan et al. 1992).
